

ArcheryKeeper

Quick start instructions

(*Tip:* This app is designed for **mobile phones**. It will look and work best if you open it on your smartphone.)

1. Setting Up a Round

Once opened, you will see the **Round Setup** screen.

1. **Select Round Type:** Choose a preset (like **IBO 3D**, **Vegas 300**, or **IFAA**) from the dropdown menu.
 - Note: You can also choose 'Custom Round Builder' to define custom scoring rules, including multiple target faces **and/or** distances.
2. **Add Shooters:**
 - Type a **Name**.
 - **Class Selection:** Depending on the Round Type, select the Gender/Age/Style **OR** toggle the "**Fun Class**" switch for casual scoring.
 - Click **+ Add Shooter**.
3. **Start:** Once all shooters are added to the list, scroll to the bottom and tap the big green **START ROUND** button.

2. Scoring

The app will guide you through the game, one shooter at a time.

- **Enter Scores:** Tap the large colored buttons (e.g., **11, 10, 8, 5, 0**) to record arrows.
- **Navigation:**
 - **Undo:** Removes the last arrow entered.
 - **Next:** Moves to the next shooter. If all shooters have finished the "End" (round of arrows), it advances to the next End automatically.

- **Switching Shooters:** You can tap the names at the top of the screen to manually switch between shooters if someone shoots out of order.

3. Viewing & Editing Scores

- **Scorecard:** Tap the **List Icon** () in the top right corner at any time to see the full scoreboard.
- **Editing Errors:**
 1. Open the Scorecard.
 2. Tap on any specific **colored arrow circle** in the grid.
 3. A "Correct Score" window will pop up allowing you to change that specific arrow's value.
- **Reordering:** To change the order of the shooters, go to the scoring screen and tap the **Arrow Icon** (located at the top right, next to the scorecard). This will open the list of shooters. You can then use the arrows to the right of a shooter's name to move them up or down into the desired sequence.

4. Saving & Sharing

- **Auto-Save:** The app automatically saves your progress to your browser's memory. If you accidentally close the tab, just reopen it, and your game will resume exactly where you left off.
- **Export:** Inside the Scorecard view, click **Copy to Share**. This copies a text summary (CSV format) to your clipboard that you can paste into a text message, email, or Excel.
- **New Game:** To start over, tap the **Rotate/Reset Icon** () in the top right header.
